SINDHUJAA REDDY VADDE

502-471-0094 | sindhujaa.vadde@gmail.com | Portfolio Website | LinkedIn | Work authorization: US citizen

Computer Science and **Business Analytics professional** with experience in Python, SQL, **application development**, and **machine learning** through hands-on projects. Skilled at solving technical problems, working with data, and building practical applications using modern development tools and **AI technologies**. Combines analytical thinking with a strong interest in developing technology solutions that address real-world problems.

EDUCATION

University of Louisville **Aug 2025-Aug 2026**
Master of Science, Business Analytics (MSBA) **GPA: 3.8 / 4.0**

PROFESSIONAL EXPERIENCE

Sri Sindhu Infra **Dec 2023 – May 2024**
Data Analyst Intern

- Processed ~15,000 operational and financial records using Python and Pandas, performing data cleaning, transformation, and validation to prepare analysis-ready datasets.
- Analyzed project costs, pricing trends, and expenditure patterns to identify financial discrepancies and support cost-monitoring and reporting activities.
- Developed 3 interactive Power BI dashboards to track project expenditure, financial KPIs, and operational performance, improving visibility into cost trends.
- Implemented data validation checks to improve database accuracy by 5% and streamlined Excel reporting workflows to reduce manual effort by 25%.

PROJECTS

Smart Customer Support Assistant | RAG, Microsoft Foundry, GPT-5-mini, Python

- Built a Retrieval-Augmented Generation (RAG) assistant using Microsoft Foundry, integrating 4 business documents into a retrieval pipeline to generate context-grounded responses without custom model training.
- Engineered system prompts for source-grounded responses, hallucination prevention, out-of-scope handling, and allergy-related safety; designed a 20-question evaluation suite spanning 5 test categories.
- Integrated Foundry Agent Service, File Search, and the Python `azure-ai-projects` SDK to orchestrate retrieval and response generation, with evaluation focused on groundedness, relevance, and coherence.

Financial Risk Analytics Dashboard | Live Demo

- Integrated SEC EDGAR, Yahoo Finance, and 10-K filings to analyze company risk across seven dimensions, combining financial fundamentals, market indicators, governance, and risk disclosures.
- Engineered a configurable composite-risk scoring model using percentile normalization, directional adjustments, and weighted aggregation to rank companies by relative risk.
- Developed an interactive Streamlit dashboard featuring company risk profiles, sector comparisons, risk heatmaps, exploratory charts, and downloadable CSV reports.

AI-Based Resume Screening (NLP Project)

- Processed ~2,400 resumes using TF-IDF vectorization, K-means clustering, and LDA topic modeling to extract textual features and classify candidates across 25 job categories.
- Developed and benchmarked Logistic Regression and Multilayer Perceptron (MLP) classifiers, achieving 64.7% accuracy with Logistic Regression versus 56.1% with MLP.
- Integrated text preprocessing, feature extraction, unsupervised learning, and supervised classification into an NLP pipeline to analyze resume content and automate candidate categorization.

SKILLS AND CERTIFICATIONS

Certifications & Badges: Google analytics, AWS Cloud Essentials, AWS AI Driven Development Lifecycle, AWS Compute
Programming & Libraries: Python (Pandas, scikit-learn, Matplotlib), SQL, TypeScript, Java, C, HTML/CSS
Data Analytics & BI: Power BI, Tableau, Data Mining, Root-Cause Analysis, Database Management
AI Tools & Machine Learning: Sagemaker, Bedrock, Predictive Modeling, Natural Language Processing (NLP), AI Frameworks, Data Pipelines, Claude Code, Kiro, Antigravity
Other: Docker, Lambda, Github Actions
